SUMMARY

AI Engineer skilled in Machine Learning, Generative AI, and Agentic AI systems, with experience building LLM-powered applications using Python, LangChain, LangGraph, RAG, and scalable backend architectures

EXPERIENCE

Full Stack Web Developer Intern

G Tech Web Marketing Pvt. Ltd.

July 2025 - August 2025, Mayapuri, Delhi

- Engineered and optimized RESTful APIs using Node.js and Express.js, enabling reliable data exchange between applications and databases while improving integration efficiency by 35%.
- Designed scalable backend services and database workflows for client applications, enhancing system performance, maintainability, and data accessibility across multiple projects.
- Developed and deployed end-to-end MERN applications for 3 client projects, implementing secure authentication, efficient data management, and production-ready architectures supporting 2,000+ daily active users.
- Collaborated on feature delivery, debugging, and deployment processes, reducing development turnaround time by 25% and improving overall application reliability.

PROJECT

Synthmarket AI - Multi-Agent Market Simulation & Product Analysis Platform

[synthmarket-ai-frontend.vercel.app](#) • May 2026 - June 2026

- Developed an AI-powered market simulation platform that evaluates product strategies through adversarial multi-agent discussions and persona-driven decision making.
- Architected a stateful LangGraph workflow with persistent memory, Human-in-the-Loop (HITL) controls, and real-time streaming for interactive simulation execution.
- Implemented RAG-powered contextual grounding and intelligent agent orchestration to deliver data-backed market insights and reduce hallucinations.
- Tech Stack: Python, FastAPI, LangGraph, LangChain, AstraDB, MongoDB, SQLite, Streamlit, Groq API, Google Gemini API, RAG, SSE.

Vantaguard - Multi Agent Security Auditor

[35.154.61.226:8501](#) • April 2026 - May 2026

- Developed an AI-powered security auditing platform that autonomously analyzes repositories, identifies vulnerabilities, and validates exploitability through isolated sandbox execution.
- Architected a stateful multi-agent workflow for repository mapping, attack surface analysis, exploit generation, verification, and automated report generation.
- Implemented secure Docker-based verification environments with dynamic dependency resolution and proof-of-concept execution to reduce false positives from static analysis.
- Tech Stack: Python, FastAPI, LangGraph, LangChain, Docker, MongoDB, Streamlit, Groq API, Google Gemini API.

EDUCATION

B.Tech Computer Science and Engineering

Dr. Akhilesh Das Gupta Institute of Professional Studies • Shastri Park, Delhi • 2027 • 9.35

Senior Secondary Education

Gandhi Memorial Govt boys SSS • Shahdara, Delhi • 2022 • 8.1

Secondary Education

SR Capital Public School • Shahdara, Delhi • 2020 • 8.8

SKILLS

Programming Languages - Python, JavaScript, TypeScript, Java, C, C++
AI / Machine Learning - Scikit-Learn, TensorFlow, Pandas, NumPy, Matplotlib, Seaborn, NLTK
Generative AI & Agentic Systems - LangChain, LangGraph, CrewAI, RAG, Prompt Engineering
Vector Databases & Databases - Pinecone, ChromaDB, FAISS, AstraDB, MongoDB, SQL, SQLite, Redis
Backend & API Development - FastAPI, Flask, Node.js, Express.js, REST APIs
Cloud, DevOps & Tools - AWS (EC2, ECR, Elastic Beanstalk, CodePipeline), Git, GitHub, Docker, Selenium, BeautifulSoup
Frontend & AI Interfaces - Streamlit, Gradio, React.js, Next.js, HTML, CSS, Tailwind CSS, Bootstrap
Core Concepts - Data Structures & Algorithms, OOPs, DBMS, Operating Systems, Computer Networks
